Russian — Native

SUMMARY

Full-stack developer with commercial experience in front-end and WordPress development, and a growing back-end practice built through self-driven products using Next.js, TypeScript, and Supabase. I design data models, connect front ends to real APIs — including third-party AI services like the Gemini API — and take a feature from database schema to shipped interface rather than stopping at the UI. Comfortable with React and modern JS/TS tooling, I pick up whatever a project actually needs, from Agile teamwork to owning a build end to end.

PROJECTS

Motion View ↗

NEXT.JS · TYPESCRIPT · SUPABASE · CLAUDE CODE

A personal web application that brings everything I need for work and daily life into one place — from development tasks to tutoring. Built with Next.js and TypeScript on a Supabase backend (database and authentication). The project shows end-to-end development: designing the data model, wiring the frontend to the backend, and working with real user data — the full-stack side beyond the front end.

SnapChef View ↗

NEXT.JS · TYPESCRIPT · SUPABASE · GEMINI API · CLAUDE CODE

A web app for saving and finding recipes: snap a photo of a recipe and the app reads it and stores it in a clean, structured form. Built with Next.js and TypeScript on Supabase, with recognition powered by the Gemini API. The project demonstrates integrating a third-party AI service, working with a database, and designing a fast, simple user experience.

Yacht Rental Website View ↗

HTML · JS · CSS

As a team lead, I coordinated development, managed tasks, and ensured smooth collaboration within the team. This web platform allows users to browse, book, and rent yachts, featuring an intuitive UI, interactive filters, and a seamless booking process. Built with React and modern frontend technologies, it ensures a smooth user experience and responsive design.

EXPERIENCE

Front End Developer

Mkey Media · June 2025 – Present

- WordPress development from scratch: theme integration, custom fields, plugins, and content management.
- Shopify: building custom themes, integrating and customizing apps.
- Website setup, migration, and long-term maintenance.
- Frontend development with HTML, CSS, JavaScript; responsive and cross-browser layouts.
- Commercial experience with Next.js, server-side rendering, and API integration.

Chemistry and Mathematics Tutor (Algebra and Geometry)

Nova School · July 2024 – Present

- Conducting individual lessons in mathematics and chemistry.
- Explaining complex topics in a clear and accessible way.
- Preparing students for tests and exams.
- Adapting the curriculum to the student's level.

Sales Manager

PSPF “Ankor-Teploenergo” · July 2023 – Feb 2025

- Customer communication.
- Lead generation and client acquisition.
- Client database management.
- Problem-solving.

EDUCATION

National Technical University “Kharkiv Polytechnic Institute”

Bachelor's degree in Electrochemistry (2020 – 2025) · Master's degree in Electrochemistry (2025 – Present)

GoIT — Fullstack Developer

2024 – 2025
